With one call to our Patient Navigators (1-800-262-5462), you can access our complete RMHC multidisciplinary team.

We know learning that your child has a tumor, whether benign or malignant, can be extremely stressful for you as well as your child. That's why our multi-disciplinary Pediatric Sarcoma team works closely with you, your child and each other to get you the right diagnosis and treatment plan in the shortest amount of time.

While most tumors in children are benign, our board-certified pediatric orthopedic and oncology specialists have extensive experience and knowledge in the treatment of pediatric sarcoma. Whether you need an initial diagnosis, second opinion or long-term follow-up, our multi-disciplinary approach to bone and soft tissue sarcoma care brings professionals together from all of our related programs to provide the full spectrum of care, including systemic therapy, advance limb preservation techniques and oncologic non-surgical management.

Our teams have created a warm and inviting environment in which we provide access to advance therapies tailored for each patient. From the moment you meet our physicians and extended care team you'll experience our dedication to the best for you and your child. Should inpatient care be needed, our Child Life specialists work hard to make sure that life remains as normal as possible for children while in the hospital.

Additionally, our oncology nurse navigator is here with you every step of the way, helping to coordinate care and ensure that you have a seamless patient experience.

- Provides education to help you understand medications, chemo and any side effects
- Attends consultations, appointments and treatments as needed to support and coordinate care
- Offers access to financial, transportation and emotional resources
- Plans appointment schedules and consultations to make sure that your treatment plan is individualized for your particular needs and situation

From diagnosis to treatment and long term follow-up, **we are here for you.**

Patient Stories

The most commonly diagnosed tumors in children are Ewing Sarcoma and Osteosarcoma. We know its helpful to hear from past patients so we are honored to share some of their stories here and online.

“Not only did you save my life, but you made it so that I have never felt held back from doing the things that I am passionate about. I have biked thousands of miles and literally climbed mountains with my friends and family, and all without experiencing any pain or discomfort and I've never had any trouble keeping up. You've made so many great memories possible, and I have always felt safe knowing that my care is in your hands.”

– Kris T.
(pediatric sarcoma patient, diagnosed at age 16).

“There are no words to describe what it is like to face a diagnosis of osteosarcoma. Thanks to the support and care our daughter received at Rocky Mountain Hospital for Children, she doesn't let anything stop her from achieving her dreams. Our daughter is living the life she always wanted.”

– Inton *(mom of osteosarcoma patient who was diagnosed at age 12).*
